

Upgrading to V2:

We have tried to make our new version Feature Rich, Simple & Secure. So it is highly recommended to upgrade to V2.

In order to update follow the below steps:

- 1) From your older version plugin directory Delete all Files inside the Multi-Purpose-Form-Generator **EXCEPT saved-forms folder !!!**.

Make sure you don't delete saved-forms folder, or else you will not be able to recover your old forms!!!

- 2) Extract the new plugin in a different directory and Copy-Paste, assets, Documentation, library and index.php files into old plugin directory.

- 3) Open the form generator URL in browser (same as old URL). You will find similar interface showing your saved forms.

That's it. You have successfully upgraded to latest version.

[Highly Recommended] Continue reading Documentation-v2.0 to start using it.

Having any difficulties? Let us know in plugin comment section.
